

# Ticket Transmission User Guide

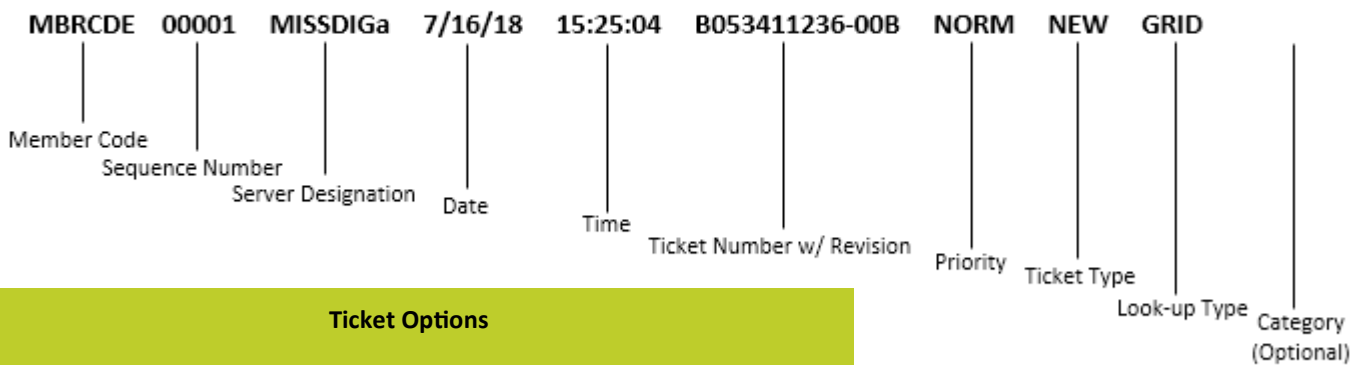

A ticket is transmitted to a member when a contractor's work location overlaps the facility location information a member code's database. That information includes the lines and/or polygons.

Closely review the information included on a ticket, as it will indicate the priority type, ticket type, and look-up type. Please note that if you use Ticket Management Software (TMS) that parses ticket information or you use XML ticket format, you may not see the ticket header.

See sample ticket header below.

### SAMPLE TICKET HEADER AND COMPONENT DESCRIPTION

Ticket Options
